

power of intelligence

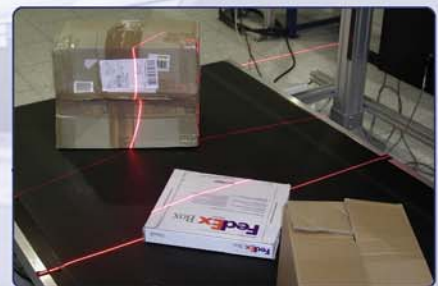

■ ArgusParcel

ArgusParcel is the technologically most advanced data capturing solution for parcels and mixed shipments. It identifies and reads addresses or shipping labels from parcels, bundles or flats in one pass, enabling fully automatic sortation.

ArgusParcel works as a designated system per sorter or as a central decoder for parcels from all sorters in a distribution center.

In combination with **ArgusBarcode** and **ArgusVideo-coding** it provides a fully integrated suite to cover all data capturing needs.

The individual solution can be scaled up or down to adapt to throughput and suit a shipper's specific needs. Interfaces and hardware platform are flexible and open to allow for easy integration of additional third party processors and host system workflows.

Features:

- Automatic reading of addresses and shipping labels
- Self guided identification of regions of interest
- Omni-directional presentation of parcels (360°)
- Scalable to suit trough-put
- Unsurpassed read rates even on difficult scenarios

power of intelligence

■ ArgusParcel

The next generation of automatic address and label reading

Technical Data:

- Capturing data at belt speeds of up to 600 ft/m (3m/s)
- 130 dpi minimum image resolution
- OCR/ICR engine for printed and handwritten information
- Scalable to suit any through-put
- Operates with all leading camera manufacturers
- Standard hardware platform

ArgusVideocoding (optional):

- On-line and off-line video coding
- Remote or on-site video coding
- Automatic image enhancement and rotation
- Auto complete functionality to minimize keystrokes

ArgusBarcode (optional):

- 1D barcode decode

Reject Processor (optional):

- Integration of reject processor to minimize video coding requirements
